Section 2.1: 1Password App for Mac & Windows - Installation

Installation can be done via two methods:

- **Self-Service App** (recommended) or...
- **Manual download and Install**

We will cover both here, but for convenience **we recommend using the Self Service app**.

Note: for Windows, you will need to do this process manually as there is no Self-Service app for Windows. This guide is intended for Mac but the general steps are similar.

- App Install Method 1: Self-Service.app (recommended)
- App Install Method 2: Manual Download

App Install Method 1: Self-Service.app (recommended)

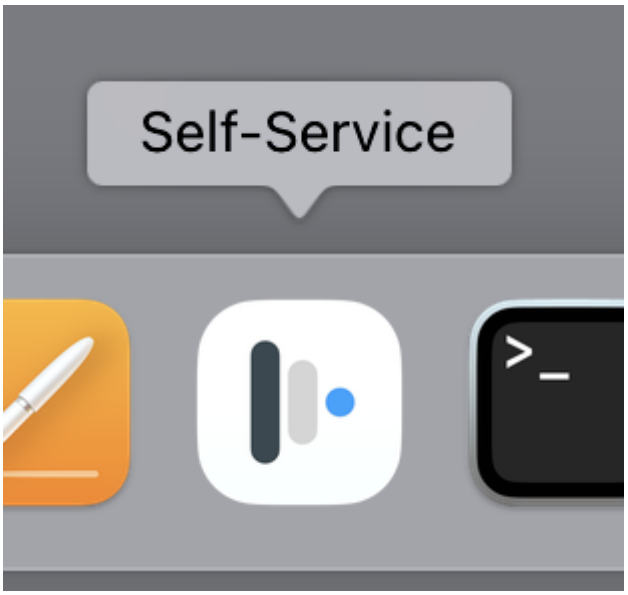

Installing 1Password app using the Self-Service app

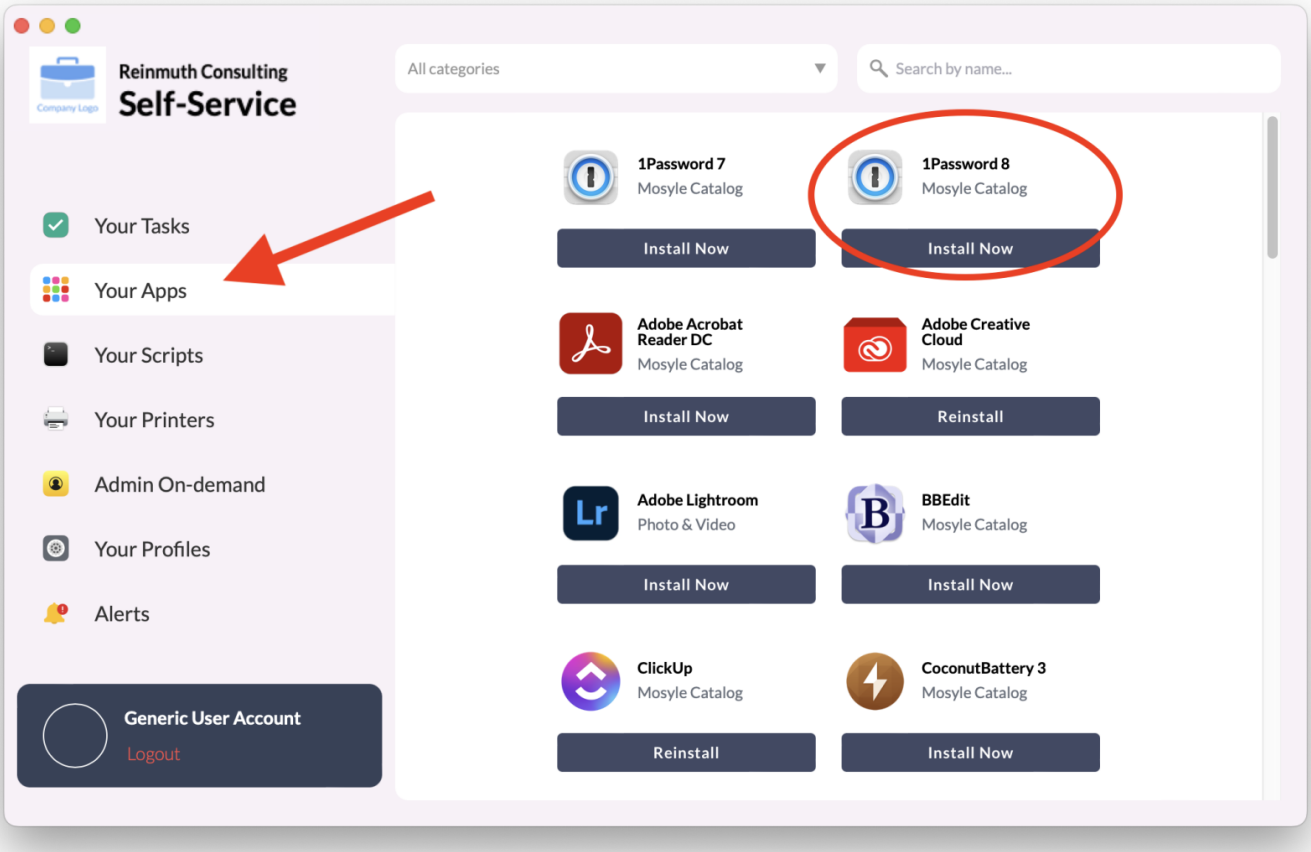

Mosyle is a mobile device management system that allows us to deploy apps to managed devices without using Apple's Mac App Store. It's like a smaller "app store" that we curate to make installation easier. This curated "app store" can be found in the Self-Service app.

Step 1: Open the Self-Service app

Find the **Self-Service app** on your Dock and click to run the app. If the app is not located on your Dock, you can find it in the Applications folder using Finder. You can also quickly launch the app from Spotlight by using Command + Spacebar (⌘+).

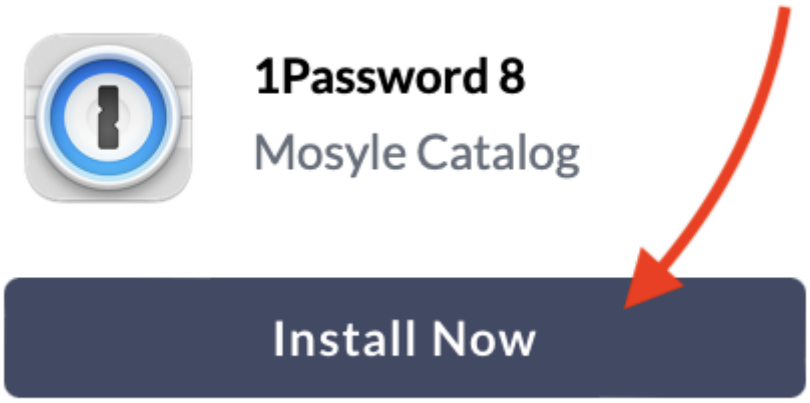

Once the Self-Service app is running, click the **Your Apps** tab. **1Password 8** should appear at the top. If it's not there, scroll until you find it or search by name.

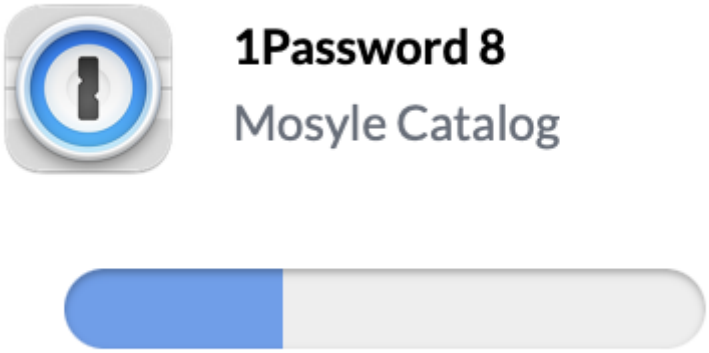

> “□□
>
> Note: Please make sure you are installing 8 and not 7. Version 7 should no longer be available, but verifying you are installing version 8 is a good idea.

Step 2: Install Now

Click the **Install Now** button and wait for the process to complete.

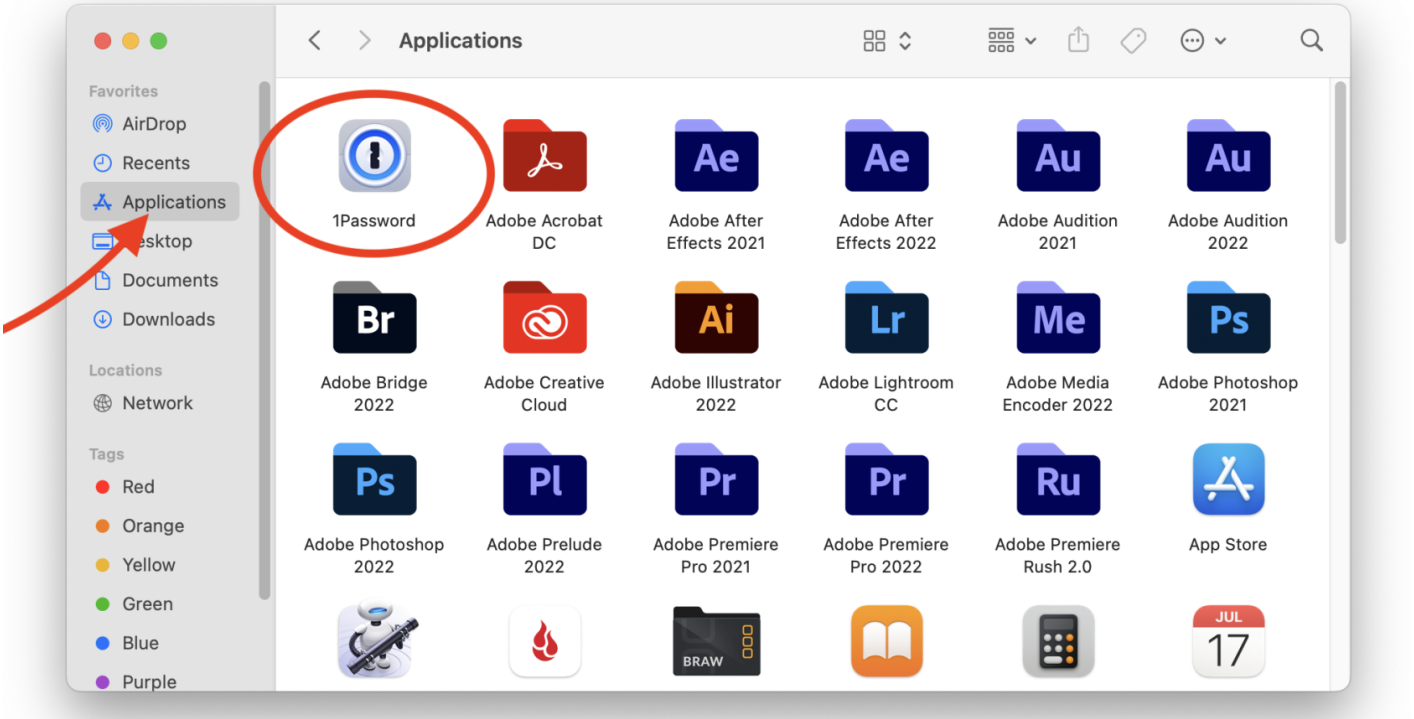

Step 3: Open 1Password

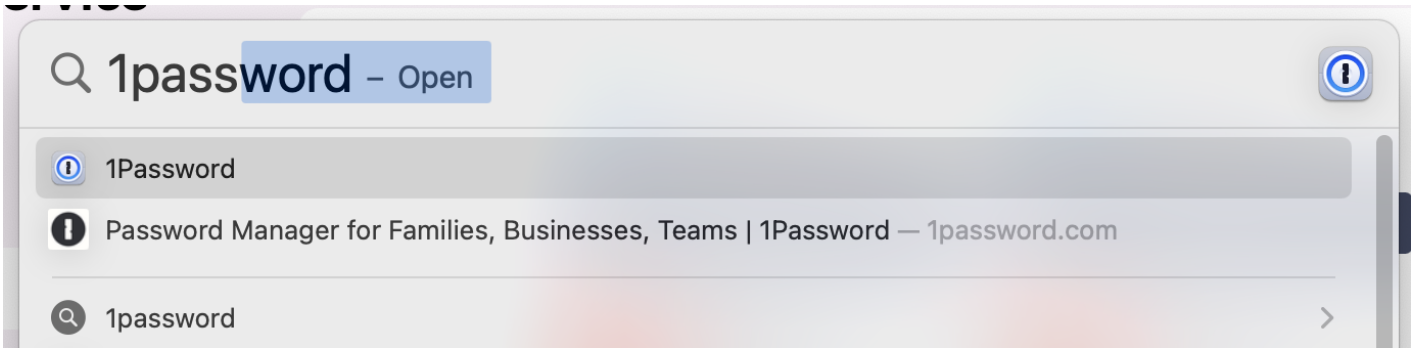

Once the installation has finished, run the 1Password app. You can find the 1Password app in one of two ways:

- Open Finder, click on the Applications heading, and 1Password should be in your installed applications folder.

- Search for 1Password using Spotlight Search.

> Reminder: Default keyboard shortcut is Command + Spacebar (⌘+) to bring up Spotlight, then type "1pass" and press `return`.

Step 4: Place 1Password on the Dock (optional)

For convenience, you may wish to place the 1Password app icon somewhere else on your Dock. This step is optional but recommended.

Step 5: Proceed to Section 2.2!

Continue to **Section 2.2** to sign into the app and configure it. If you have any questions, contact IT for help.

App Install Method 2: Manual Download

> ⚠
>
> Note: We do not recommend the full manual approach, but it is an option. We recommend using the **Mosyle Self Service app** method. If you have already installed the 1Password app, skip to Section 2.2 to sign in.

Step 1: Download

Click on the corresponding link, depending on your OS:

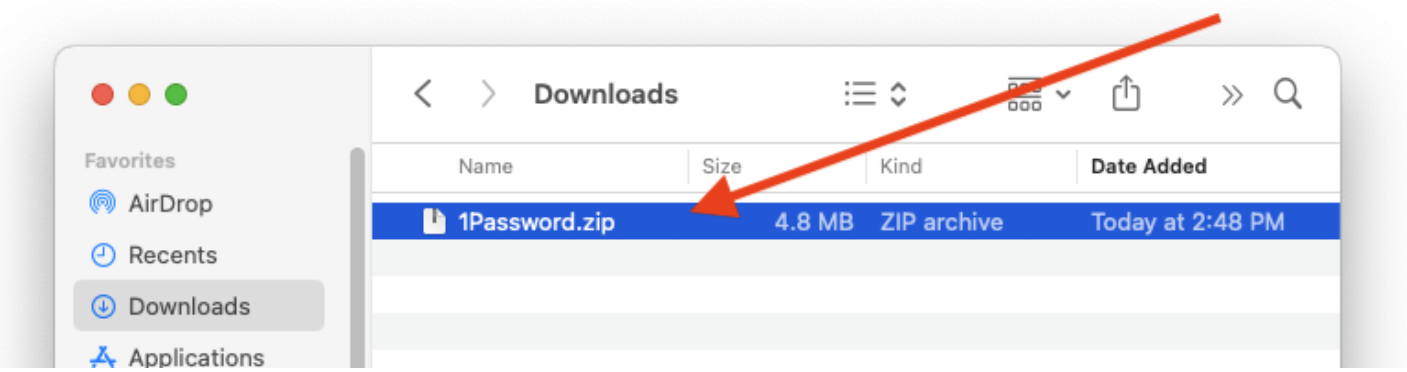

Mac: https://downloads.1password.com/mac/1Password.zip

Windows: https://downloads.1password.com/win/1PasswordSetup-latest.exe

---

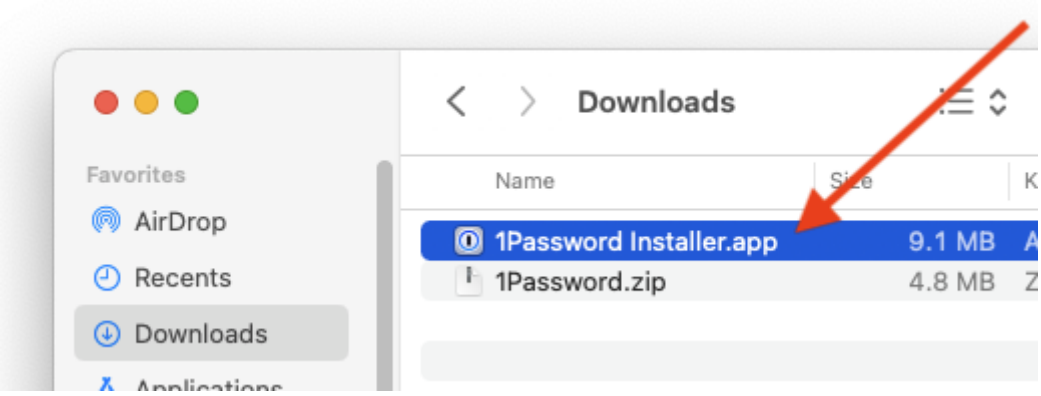

Step 2: Install

Mac

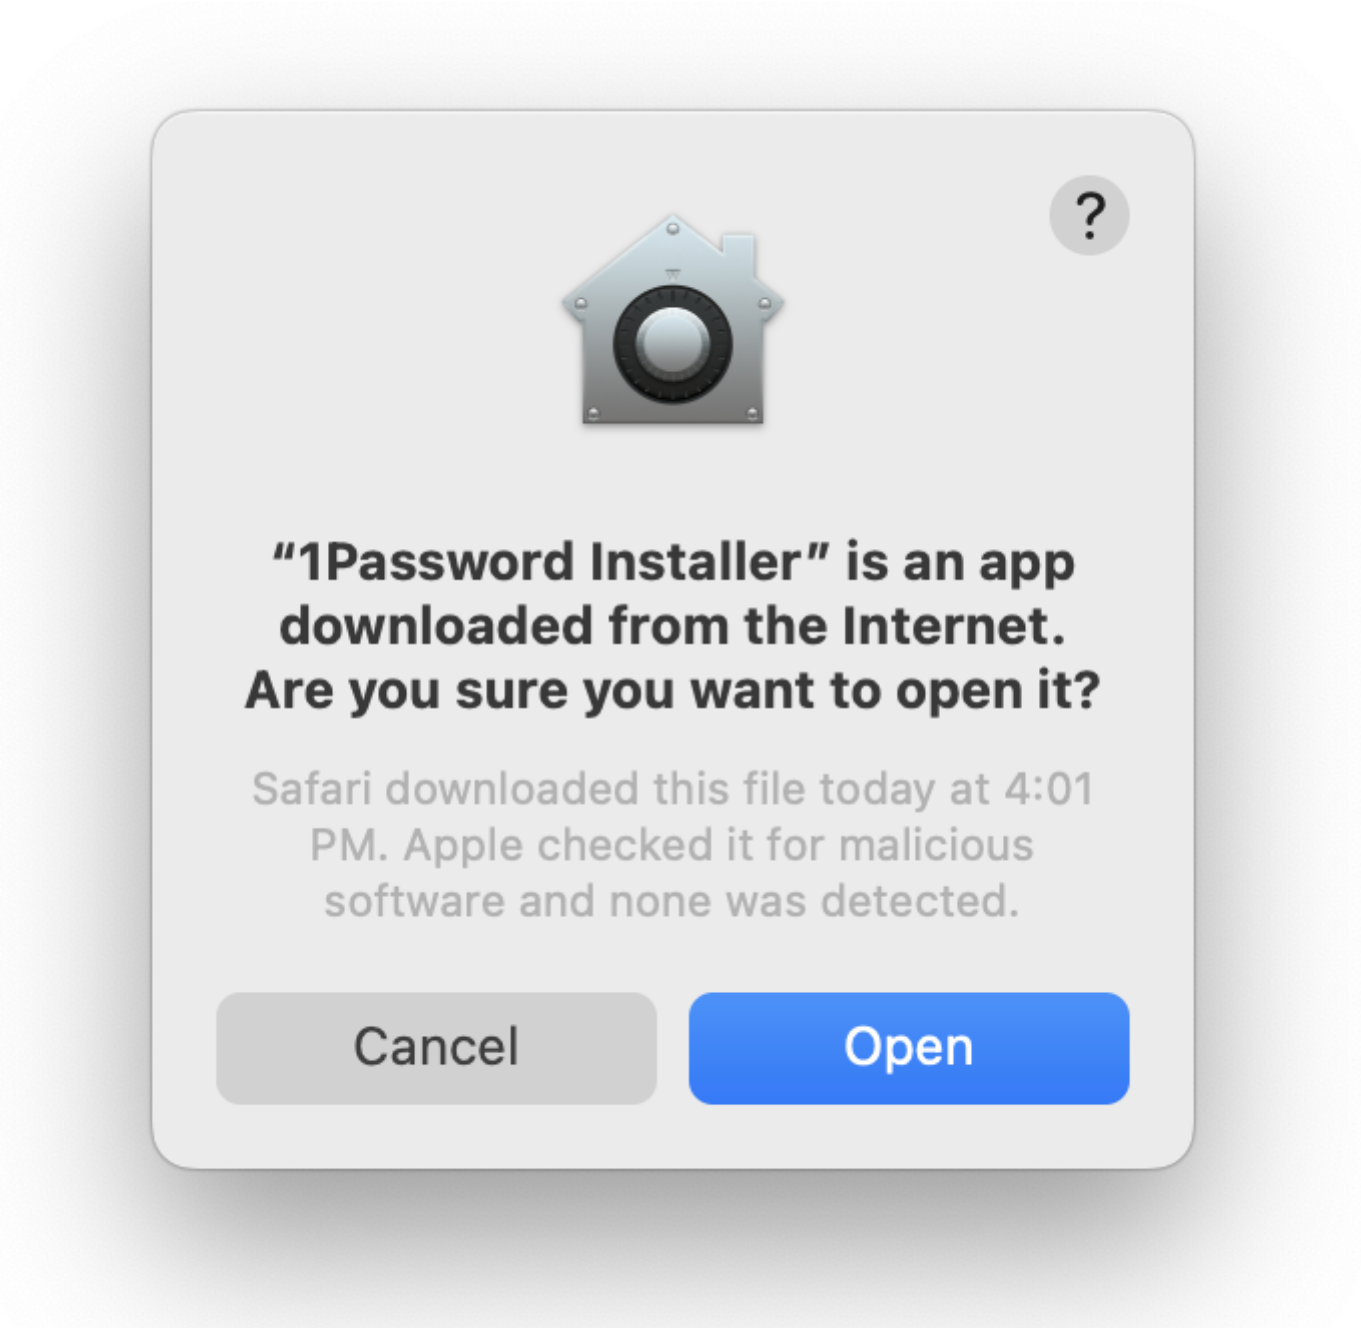

Open the `1Password.zip` file, and then run `1Password Installer` app.

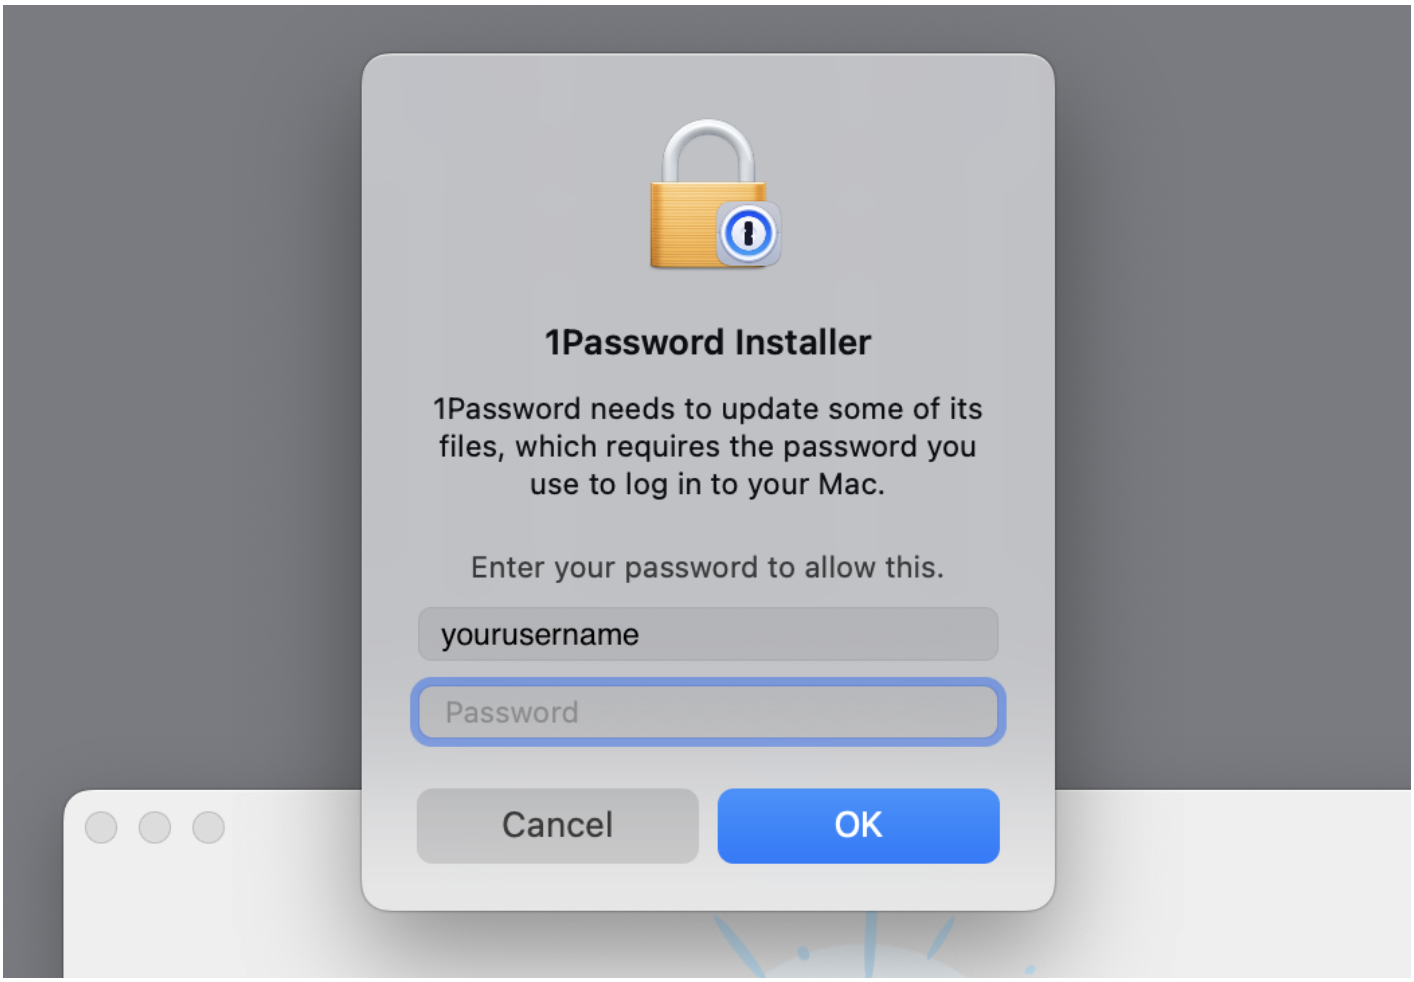

> Note: Depending on your Finder settings, the app name may not include the `.app` filename extension. It may also be automatically unzipped for you, in which case you will only see the Installer app and not the `.ZIP` file.

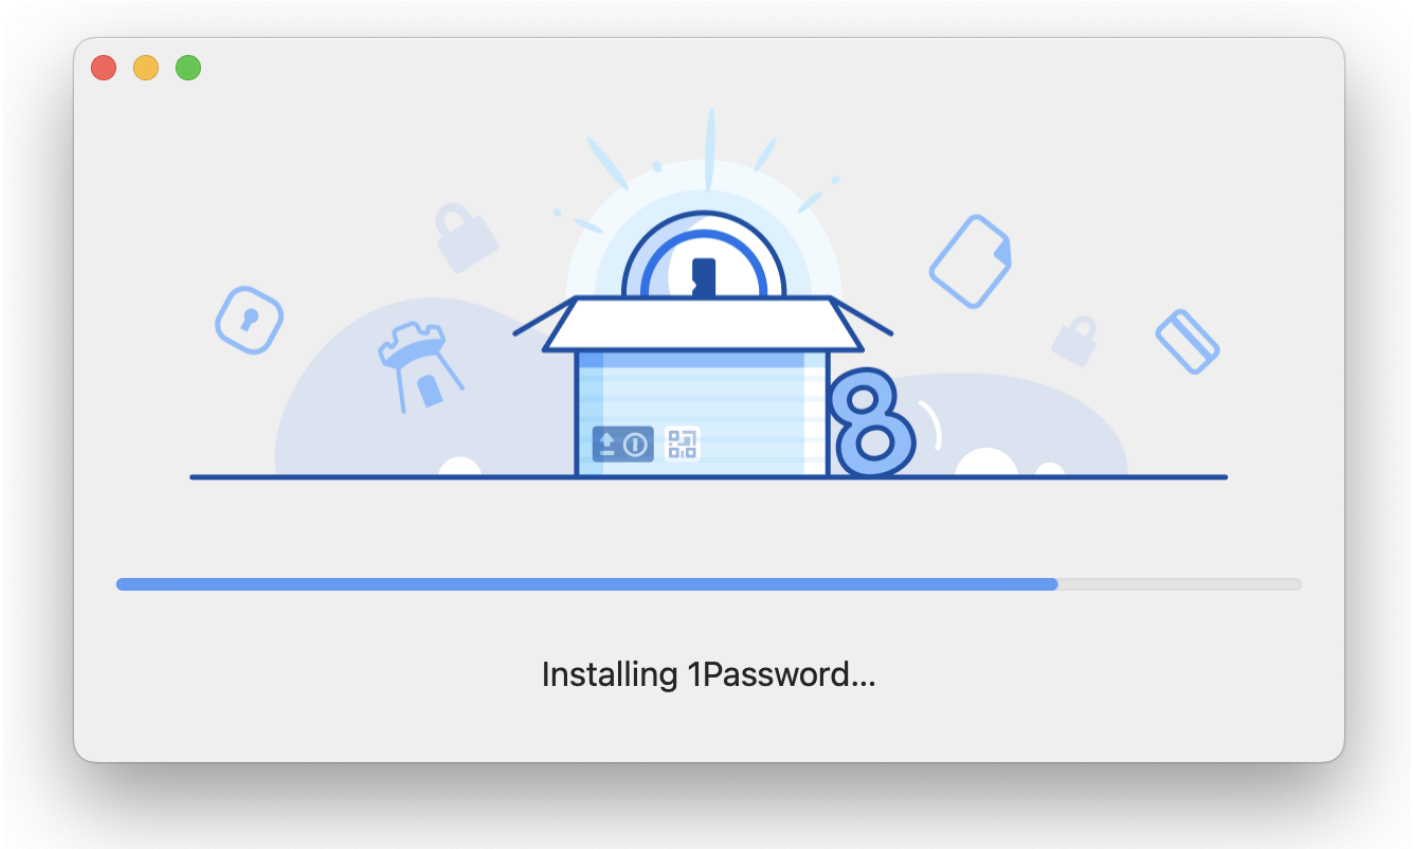

You may encounter a warning that the app is downloaded from the internet. This is normal. Hit Open to continue.

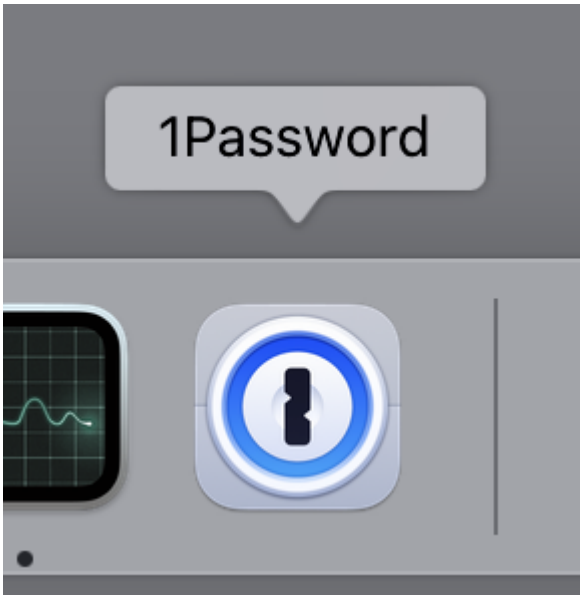

You may also be asked to enter a password to install.

Please use your OS password for this install, the same as the one you use to login to your machine.

Once the installation is finished, 1Password should appear in your Dock. Start it up and continue with **Step 3**.

⊞ Windows

Run the `1PasswordSetup-latest.exe` to begin the installation and follow the onscreen instructions to completion

---

Step 3: Proceed to Section 2.2!

Continue to **Section 2.2** to sign into the app and configure it. If you have any questions, contact IT for help.
